BUENAS PRÁCTICAS Actuaciones Cofinanciadas

Construction of the CEIP "LA LIBERTAD"
in Illescas (Toledo)
Secretary General of the Department of Education,
Culture and Sports

**Programa Operativo
de Castilla la Mancha**

Año 2018

Fondo Europeo de Desarrollo Regional

The construction of the CEIP "LA LIBERTAD" in Illescas (Toledo) is submitted as a “Good Practice” of the Secretary General of the Department of Education, Culture and Sports in 2018

The new and expected school of Child and Primary Education “La Libertad” opened on November 15th, being a center of new edification, of more than 2.000 m² that joins the four schools already existing in the town of Illescas (Clara Campoamor, Ilarcuris, La Constitución and Martín Chico).

Illescas is one of the towns in Castilla-La Mancha that recently had present a highest growth of scholars. In consequence, the locality needed this type of educational resources for the benefit of the scholars and their families.

The activity's eligible cost is 3.719.184 €. The aid from FEDER represents 80% of the amount, reaching 2.975.348 €.

This action has meant the increase of 225 places of schooling for both boys and girls from 3 to 12 years.

This action is considered a “Good Practice” due to:

1º. The role of the European Regional Development Fund in the action has been sufficiently disseminated among the beneficiaries, the potential beneficiaries and the public.

It has been accomplished the minimum advertising requirements for the action in order to be financed within the European Cohesion Policy. More specifically, during the construction of the building, there was an indicative poster of big dimensions and large visibility, just in front of the place where the construction was being done.

This poster was provisional, so once the construction of the building was finished, this poster was replaced for a permanent one, with adequate proportions, located in a preferential and more visible place in the main entrance.

Beside this, each steps of the project has been disseminated in the news, mainly in digital and printed regional and local media, alluding the co-financing of the project by of the European Regional Development Fund.

La Consejería de Educación, Cultura y Deportes ha adjudicado por un importe de 2,4 millones de euros la construcción del nuevo centro de Infantil y Primaria número 6 de Illescas, que contará con nueve unidades, ampliables a dieciocho, según recoge el Diario Oficial de Castilla-La Mancha (DOCM).

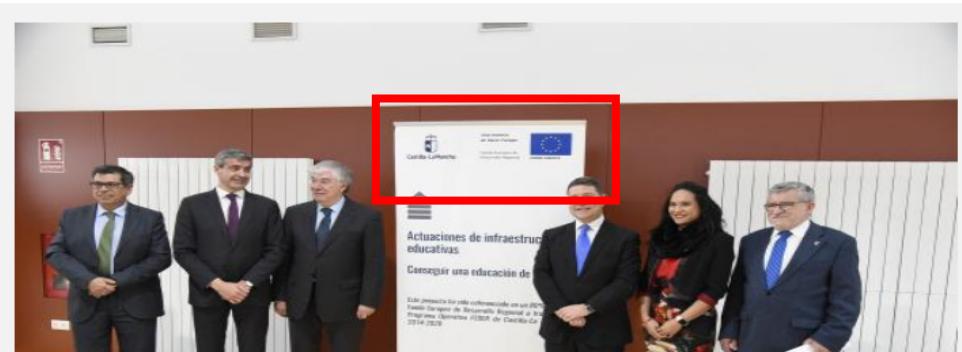

El colegio partía de un presupuesto base de tres millones de euros y un plazo de ejecución de la obra de doce meses, aunque finalmente se ha adjudicado en 2.395.524 euros (IVA incluido) que estará financiado en un 80 por ciento por el Fondo Europeo de Desarrollo Regional, a través del programa operativo Feder de Castilla-La Mancha 2014-2020.

El diseño del nuevo centro educativo, que estará situado en la calle Antonio Skarmeta, permitirá la utilización de los locales destinados a biblioteca, salón de usos múltiples y AMPA con independencia del horario escolar, al contar con accesos independientes desde la calle o a través del vestíbulo principal.

Según el proyecto del centro educativo, elaborado por la Unidad Técnica de la Consejería de Educación, Cultura y Deportes, el edificio contará con producción de calor mediante calderas con combustible de biomasa.

Official inauguration of the school, which was attended by the President of the Junta de Comunidades de Castilla-La Mancha, Mr. Emiliano García Page, with the Councilor of Education, Culture and Sports, Mr. Ángel Felpeto, to show their support for the Plan of Educational Infrastructures, co-financed by European Regional Development Fund.

El presidente de Castilla-La Mancha ha inaugurado el IESO 'Josefina Aldecoa' y el Colegio Público 'Libertad' de Illescas, obras incluidas en el Plan de Infraestructuras que se está ejecutando

El Gobierno regional ha invertido en Illescas más de 26 millones de euros en infraestructuras educativas desde que en el año 2000 se recibieron las competencias

Emiliano García-Page ha confirmado que, en el próximo Plan de Infraestructuras, la construcción el Colegio Público nº 7 de Illescas "será una prioridad".

El consejero de Educación, Cultura y Deportes ha recordado que en estos años, exceptuando el periodo de la anterior legislatura "que no se hizo nada", se han construido en Illescas cuatro colegios, un IESO y un Centro de Adultos y se prevé un nuevo colegio que se incluirá en el nuevo Plan de Infraestructuras.

Illescas (Toledo), 15 de noviembre de 2018.- El Gobierno de Castilla-La Mancha ha invertido en la localidad de Illescas más de 26 millones de euros para la construcción de cuatro colegios, un IESO y un Centro de Adultos desde el año 2000 en que se recibieron las competencias y hasta el curso actual, al ser esta una de las localidades que mayor crecimiento de población escolar ha experimentado en estos años.

"Y este avance continuará", según ha confirmado el presidente de Castilla-La Mancha, Emiliano García-Page, durante el acto celebrado con motivo de las inauguraciones del IESO 'Josefina Aldecoa' y del Colegio Público 'Libertad' de Illescas, con la construcción del Colegio nº 7 de esta localidad, que estará incluido en el próximo Plan de Infraestructuras Educativas "de forma prioritaria".

2º. Integration of novel elements.

The integration of novel and innovative elements in the school is transferred to the projects it develops, such as the "Chess Project", with weekly chess session in Primary, the "Educa in Eco Project" on recycling, with the help of Ecoembes and the Major of Illescas, and the "Fruits and Vegetables Project" promoting the consumption of fruits and vegetables.

Beside this, other aspects can be stand out, such as the participation in the Meta Plan (Plan for Educational Modernization of Vocational Training and TIC), with which the centre's technical equipment is renovated. Specifically, the interactive panels for classrooms and 6 laptops for the students, mainly to update the teaching-learning methodologies and the Teacher Training Plan for the transformation of educational spaces into playful and creative ones.

3º Achievement of the suitable results related to the objectives pursued.

The main purpose of the construction of the new center was to endow the needs of the school community of Illescas, which had a high pressure of schooling, due to a demographic increase of population.

This aim has been achieved due to the new building, divided in two floors with access through a porch. The classrooms are placed on both perimeter sides, just looking for the best orientation. The administration area is placed next to the entrance and there's a piece for services and facilities. It also has a sports court that communicates directly with the building.

The distribution of the center in areas allows a better accessibility and functionality, providing teachers and scholars, as well as family and neighbors, comfortable facilities, counting with new heating systems and classrooms adequate to the number of the students.

4º Contribution to the resolution of a necessity in the region.

This school satisfied the demand for schooling in an area of the region that had suffered such a strong population growth recently; in fact, Illescas has grown in 10 years, since 2008 to 2018, around 8,000 inhabitants. This population increase has happened mainly in the new suburbs of

Illescas, Señorío de Illescas among them, where the school is located, where the population has grown in those years more than 5,500 inhabitants of the total population increased. It is therefore that the construction of this center has been a response for the growing demand for schooling, where it was needed in Illescas.

5º. High degree of coverage on the population targeted for the action.

The school is located in the Señorío de Illescas neighborhood, 5 kilometres far from downtown, where the other schools are located. It was therefore necessary to build a school in this neighborhood so that both boys and girls and their families had an educational option near their homes, avoiding long daily journeys.

On the other hand, the newly inaugurated CEIP "La Libertad" represents a step within the project to respond to a high demand for education in the Señorío de Illescas neighbourhood.

That is why the construction of another new school is planned, for which the Major of the town and the Ministry of Education have already signed an agreement in order to start its construction to completely cover the child and primary population demand.

6º. Taking into consideration the Horizontal Priorities (equal of opportunities and non-discrimination, social responsibility and environmental sustainability).

In relation to the equality of opportunities and non-discrimination, the school complies with the valid normative, taking into account the particularities and necessities of students and teachers, so the center has an elevator for people with reduced mobility, given the fact that it is a building with two floors.

The rules of coexistence, organization and operation of the center establish as serious harmful behavior for students of primary school expressing insults and vexations caused by racial, religious, social and sexual differences, as well as isolating a colleague for those reasons or refusing to participate in activities with them. To avoid this, the school propose to have a meeting with the families to report what happened as well as take educational and disciplinary measures, tutorials and education in values.

Also, the school has been and is eventually respectful with the environment, when in construction and once completed. During construction, eco-efficient criteria were followed using a prefabricated concrete system, both in the structure and in the facade, which supposed a saving when the construction.

Beside, the school has a heating system with biomass boiler, a fuel of biological origin, respectful with the environment. Although it emits CO₂, it is the same CO₂ that the plants absorbed, so these emissions are considered null. Likewise, lighting by LEDs has a control system that allows adjusting the ignition to the actual occupation of the area and a regulation system that optimizes the use of natural light.

7º. Synergies with other policies or governmental public instruments.

The building of the new construction CEIP "La Libertad" is part of the Plan of Educational Infrastructures 2015-2019 developed by the regional Government of Castilla-La Mancha. This Plan involves an important investment in several actions to improve school facilities, both in new buildings as well as in the development and renovation of the existing ones.

In this way, as the educational center is modernized and adapted to the needs of scholars and teachers, there is also an improvement of the employment and economy of Castilla-La Mancha.
